

SOFAAMY CO. LTD

Business Management System

Information Requirements Document

Prepared For:	Sofaamy Co. Ltd, Accra, Ghana
Prepared By:	Veloxa Technology Limited
Purpose:	Information we need from you before development begins
Version:	v1.0

Introduction

This document lists everything we need from you before we begin building your Business Management System. We have grouped the items by area. Some are needed before Phase 1 starts. Others can be provided within the first two weeks of the project.

Where an item is marked as urgent, we cannot start building without it. Where it is marked as standard, we will need it within the first two weeks. Where it is marked as later, we will ask for it during Phase 2 or Phase 3.

Priority	Meaning
Urgent	We cannot start without this. It blocks the build.
Standard	We need this within the first two weeks of Phase 1.
Later	We will ask for this during Phase 2 or Phase 3.

1. Your Products and Templates

The visual configurator is built entirely from your product information. Without this, we cannot create any design canvas, visual, or quote output. This is the most important section.

1.1 Product List

Please give us a complete list of every product type you manufacture and install. For each product, we need the information below.

Item	What We Need From You	Priority
Full product list	Every product type by name — window frame, door frame, frameless glass, curtain wall, canopy, balustrade, partition, and anything else you produce	Urgent
Your standard sizes	The most common widths and heights you produce for each product type	Urgent
Minimum dimensions	The smallest width and height you can physically manufacture for each product	Urgent
Maximum dimensions	The largest width and height you can manufacture for each product	Urgent
Opening types per product	For windows: fixed, casement, sliding, louvre, awning. For doors: single leaf, double leaf, sliding, pivot, folding. Tell us which types apply to which products.	Urgent
Panel configurations	How many glass panels can your windows and doors have? Can they be 1, 2, or 3 panels? Which divisions are your standard?	Urgent
Existing drawings or sketches	Any hand drawings, CAD files, or even phone photos of your standard product drawings. These become our template references.	Standard

1.2 Your Materials

The cost estimation engine calculates the price of every job from your material list. If the list is incomplete, the system will produce incorrect quotes.

Item	What We Need From You	Priority
Your aluminium profiles	Every profile type you use, by name or code, and your current price per metre for each	Urgent

Your glass types and pricing	Every glass type you supply — clear, frosted, tinted, tempered, laminated, double glazed — and your current price per square metre for each	Urgent
Your hardware items and pricing	Every hardware item you install — hinges, handles, locks, rollers, door closers, stays — and the unit price for each	Standard
Your accessories	Sealant, rubber gaskets, screws, setting blocks. How do you price these — per metre, per unit, or as a flat rate per job?	Standard
How you calculate labour	Do you charge labour per square metre, per job, per hour, or as a percentage on top of materials? What is your current rate?	Urgent
How often prices change	How often do your material prices change, and who on your team is responsible for updating them?	Standard

2. Your Team and User Accounts

The system gives different people access to different parts based on their role. We need a clear picture of your team structure before we can set up user accounts.

2.1 Complete User List

Please give us the following information for every person who will use the system.

Item	What We Need From You	Priority
Full name of each user	The name of every person who will log in to the system	Urgent
Job title per person	Their current job title as it is used inside your company	Urgent
System role per person	Which role fits their job — field rep, supervisor, accounts, procurement, factory, QA, or management	Urgent
Phone number per person	The mobile number they will use to receive system notifications	Standard
Email per person	Their work email if they have one — used for login and notifications	Standard
Shared logins	If any part of your team — especially the factory floor — shares one login rather than individual accounts, let us know now	Standard

2.2 Team Structure

Please answer the following questions about how your team is structured.

- How many field reps do you currently have?
- Do you have one project supervisor or multiple? If multiple, how are jobs shared between them?
- Who in your accounts team confirms client payments — one person or the whole team?
- On your factory floor, is there a separate person for each production stage, or does one person handle more than one stage?
- Who should have the highest level of access — the ability to override any stage or action in the system?
- Who is our primary contact at Sofaamy for this project — the person we communicate with day to day?

3. Your Current Jobs and Client Data

This section helps us understand how to set up your system at launch and whether we need to import any existing data before you go live.

Item	What We Need From You	Priority
Your existing client list	Do you have a list of your existing clients anywhere — Excel, phone contacts, a paper register? Let us know the format and roughly how many clients are on it.	Standard
Import decision	Do you want your past client records and completed jobs imported into the system at launch, or would you prefer to start fresh from the go-live date?	Standard
Your job numbering format	Do you already have a reference format for jobs — for example SOF-2024-001 — or should the system create one from scratch?	Standard
How many jobs run at once	How many jobs are typically active at the same time? This helps us size the system correctly from day one.	Standard
Your payment terms	What are your standard payment terms with clients — for example 50% deposit before production, 50% on delivery?	Urgent

4. Client Communication

Every notification, quote PDF, and client message sent by the system is built from your communication details. This also determines how professional Sofaamy appears to your clients through the system.

Item	What We Need From You	Priority
Your WhatsApp business number	The WhatsApp number you currently use to communicate with clients on projects. This becomes the system's outgoing number.	Urgent
Your project email address	Your current email for project communication — for example projects@sofaamy.com. This will appear on quote PDFs and email notifications.	Standard
What your quotes currently show	When you send a client a quote today, what does it include — just a total price, or a full breakdown by material, labour, and unit cost? We will match this in the system.	Urgent
Your company logo	A high-resolution version of your logo, preferably PNG with a transparent background. This goes on every PDF you send to clients.	Urgent
Your standard client messages	Do you have standard phrases you send clients at key stages — for example when a quote is ready, or when a job is delivered? If yes, share them. If not, we will generate defaults for your approval.	Later
Which stages trigger a client notification	At which points do you want your client to be automatically notified — quote sent, payment received, job in production, ready for delivery? Confirm which ones apply.	Standard

5. Factory and Operations

The internal pipeline tracker is built to match exactly how your factory works. If the stages in the system do not match your real operations, your factory team will not use the tool. This section is critical for Phase 3.

5.1 Factory Floor Questions

Please go through these questions with your factory foreman or floor manager if possible.

1. Walk us through exactly what happens in your factory from the moment raw materials arrive to the moment the finished product leaves for delivery. Every step, in order.
2. Are there any steps that happen at the same time — for example, does glass processing happen while frame assembly is going on?
3. Is there a separate person responsible for each stage, or does one person handle more than one stage?
4. What does your factory team currently use to know what to build — a printed sheet, a WhatsApp message, a verbal briefing from the supervisor?
5. Do you have a quality check process you currently follow, even informally? If yes, can you share what is on it or describe it to us?
6. What happens when a job fails quality check — does it go back to a specific stage, or is it handled case by case?
7. How do you currently arrange delivery — who books it, who informs the client, and is there a standard lead time?

5.2 Please Confirm Your Factory Stages

Below are the factory stages we have assumed based on our conversations. Please confirm whether each stage is correct, correct the name if it is different, and fill in who is responsible for it on your floor.

#	Stage As We Understand It	Who Is Responsible?	Correct / Add Notes
1	Cutting — aluminium profiles cut to size		
2	Processing — shaping, forming, and finishing		
3	Holes — drilling and routing for hardware		
4	Assembly — frame components put together		
5	Glazing — glass panels fitted into the frame		

6	Quality Assurance — product inspected and approved		
7	Delivery — transported to your client's site		
+	Any stages we have missed — please add them here		

6. Branding and System Setup

These final items are needed to configure the system under your identity and get it ready for launch.

Item	What We Need From You	Priority
Your company logo	A high-resolution PNG file with a transparent background. If that is not available, a clear JPEG from any source will do for now.	Urgent
Your brand colours	If you have official brand colours you use on your documents or signage, please share them. This is optional — only if you want the system and PDFs to match your brand exactly.	Later
Your preferred web address	What address would you like your staff to use to access the system — for example app.sofaamy.com? Or would you like us to suggest and register one for you?	Standard
Your system administrator	Who on your team will manage user accounts, update material prices, and have full administrative access to the system?	Urgent
Our day-to-day contact	Who is our primary point of contact at Sofaamy throughout the project — the person we come to for approvals, feedback, and testing?	Urgent
Devices your team uses	What devices does your team currently work with — laptops, desktop computers, Android phones, iPhones? This tells us what to optimise the system for.	Standard

7. What We Will Provide in Return

Once we have received the information above, here is what we will produce and share with you before a single line of code is written.

- A confirmed scope document listing exactly what will be built in each phase, based on the information you provide.
- A finalised statement of work for both parties to sign before Phase 1 begins.
- A working Phase 1 prototype of the window frame configurator within four to five weeks of signing.
- A secure link where your team can test the system at each phase before it goes live.
- A training session for each group on your team — supervisors, field reps, factory floor, and management — before go-live.
- A dedicated WhatsApp support line for your team throughout the project and after launch.

8. How to Send Us This Information

There is no fixed format. Whatever is easiest for you works for us.
