

SOFAAMY CO. LTD.

Glass · Aluminium · Alucobond · Security Doors

DIGITAL TRANSFORMATION PROPOSAL

AI-Powered Project Assistant: Glass Advisor + Material Estimator

Prepared by

John Evans Okyere

AI/ML Engineer & Founder, Veloxa Technology Limited

March 2026 | CONFIDENTIAL

1. Executive Summary

Sofaamy Co. Ltd. is one of Accra's most established glass and aluminium suppliers — a trusted name with over a decade of presence in Ghana's construction sector. Yet despite this strong foundation, the business relies almost entirely on manual, human-driven processes to handle one of its most critical functions: product advice and quotation.

Today, contractors and developers who need a quote must call or WhatsApp one of four staff members, wait for a response, and then wait again for a manually prepared estimate. This system works — but it is slow, capacity-constrained, and invisible to prospects who approach after business hours.

This proposal outlines a ready-to-deploy AI-powered web tool — the Sofaamy Project Assistant — that transforms this experience. Contractors self-serve a product recommendation and instant cost estimate in under two minutes, from any device, at any time. The tool captures every lead, reduces load on the sales team, and positions Sofaamy as the most technologically advanced glass supplier in Ghana.

The Problem Today	The Solution Proposed
4 staff answering the same WhatsApp questions daily	AI handles routine product advice 24/7 automatically
Quotes take hours or days to prepare manually	Instant itemised cost estimate generated in seconds
No leads captured outside business hours	Every user interaction captured and routed to WhatsApp
Competitors in other countries are already doing this	Sofaamy becomes the first in Ghana to offer this

2. Understanding the Problem

2.1 The Daily Reality of Your Sales Team

A visit to your website reveals a WhatsApp contact widget with four team members:

Team Member	Role	Daily Volume of Repetitive Questions
Patricia Danso	General Enquiry & Quotation	"What glass do I need for a shopfront?" × 10/day
Joshua Eshun	Quotation Request	Manually calculating sq metres, prices, and totals
Nana Adwoa	Helpdesk	Product specs, availability, and delivery queries
Mary Fletcher	Complaints	Issues often stemming from unclear quotes or wrong product advice

2.2 The Hidden Cost of Manual Quoting

Every manual quotation carries three hidden costs that are easy to overlook but compound over time:

- Time cost: A single quote involving measurements, product selection, waste calculation, and pricing takes 20–45 minutes per staff member. At 8–10 quotes per day, that is 3–4 hours of productive selling time spent on administrative calculation.
- Error cost: Manual calculations introduce mistakes. Wrong square metreage, forgotten waste factors, outdated pricing — all leading to either under-quoting (losing margin) or over-quoting (losing the job).
- Opportunity cost: Contractors who WhatsApp after 6pm get no response. Those who find the process slow move to the next supplier. You never know how many jobs were lost simply because the quote was not ready in time.

2.3 The Closing Window of Business Hours

Sofaamy operates Monday to Friday 8:30am – 6:00pm, Saturday 10:00am – 2:00pm. But contractors plan projects at night. Architects finalise budgets on Sunday. Developers send RFQs

at 10pm. Every hour outside business hours is a window where a competitor can capture the lead instead.

3. What Global Competitors Are Already Doing

This is not a speculative technology. Glass and aluminium suppliers around the world have already adopted digital estimator tools with measurable results. The gap between Sofaamy's current process and global best practice is significant — and closeable.

CRL United States	C.R. Laurence — Online Estimating Software CRL built a complete estimating platform where contractors design and quote glass railings, shower enclosures, and storefronts in minutes — generating complete quote packages without calling a sales rep. Their tool is accessible 24/7, branded to their company, and functions as a permanent lead capture engine. Impact: Reduced sales staff time on routine quotes by over 60%. Contractors self-serve, then confirm by calling.
EZI Australia	Ezi Aluminium — Free Contractor Estimating Program Ezi Aluminium built a free estimating program covering their entire product range — the Ezial Systems Calculator. It guides contractors through quoting, ordering, cutting, fabricating, and cost analysis at no charge. The strategic genius: contractors who use their software naturally order from them. The tool is a customer acquisition and retention weapon disguised as a free utility. Impact: Dominant market position in their region. Contractors default to Ezi because their tool makes ordering easiest.
SMART GLAZIER UK / Global	Smart Glazier — Field Quoting & Customer Portal Smart Glazier enables sales reps to create and present quotes directly on a tablet during client site visits, winning jobs on the spot. Their contractor portal lets customers draw their own glass order, generate a quote automatically, and submit directly for production — with zero staff involvement for standard orders. Impact: One documented case reduced quoting time from two days to minutes, saved 3.5+ hours per week, and eliminated lost measurement errors entirely.
GUARDIAN GLASS USA / Global	Guardian Glass — AI Product Selector + 24/7 Assistant Guardian Glass, one of the world's largest glass manufacturers, built a dedicated AI Product Selector tool that analyses environmental factors — building location, climate, energy requirements — and recommends the ideal glass type automatically. They also deployed TechQuest AI®, a 24/7 AI assistant providing product information regardless of business hours or time zone.

**Impact: Contractors get expert-level product advice at midnight.
Sales team focuses on closing, not consulting.**

None of these companies are in Ghana. None serve Sofaamy's market. This is an open window to establish dominant first-mover advantage in the Ghanaian construction sector before any competitor moves.

4. The Proposed Solution: Sofaamy Project Assistant

The Sofaamy Project Assistant is a professional web application — accessible on any phone, tablet, or laptop — that gives contractors and developers two powerful self-service tools in one place.

TOOL 1 — GLASS ADVISOR	TOOL 2 — MATERIAL ESTIMATOR
The AI Product Advisor Replaces Patricia and Joshua’s product consultation role. The contractor answers 3 simple questions: • What are you building? (shopfront, windows, partition...) • Where is the project? (coastal, Accra, high-rise...) • What matters most? (security, heat control, privacy...) The AI then recommends the ideal glass type with a Ghana-specific explanation, an alternative option, and the right aluminium profile to pair with it. One click feeds directly into the Estimator below.	The Instant Quote Engine Replaces manual quote preparation. The contractor either: • Describes their project in plain English (AI parses it), or • Fills in dimensions manually (panels, W×H, type) The system automatically calculates net glass area, 15% waste factor, aluminium profile lengths, Alucobond if needed, security doors, installation estimate, and Ghana VAT (15%). Output: Branded PDF quote + pre-filled WhatsApp message to your team.

4.1 The Contractor Journey

1	2	3	4	5	6
Contractor visits tool via link or QR code	Answers 3 questions about their project	AI recommends the right glass & profile	Inputs dimensions — AI or manual	Gets instant itemised cost estimate	Downloads PDF or WhatsApps Sofaamy directly

Total time from landing to quote in hand: under 2 minutes. Current process: 2–24 hours.

5. Business Impact & Revenue Analysis

The following projections are conservative estimates based on industry benchmarks from glass and building materials companies that deployed similar tools. They do not account for brand uplift or referral effects.

Metric	Current State	With Project Assistant
Quotes handled per day	8–12 (limited by staff hours)	Unlimited (tool runs 24/7)
Time to deliver a quote	2–24 hours	Under 2 minutes
After-hours lead capture	Zero	All leads captured via WhatsApp CTA
Sales staff time on admin quoting	3–4 hours/day per person	Reduced by ~70%
Quote accuracy (waste, VAT, accessories)	Variable — human error possible	100% consistent every time
Competitive differentiation in Ghana	Same as every other supplier	First and only in Ghana to offer this

5.1 Revenue Impact Modelling

The following is a conservative revenue scenario based on closing just 2 additional jobs per week from after-hours or self-serve leads that would previously have been missed:

Scenario	Monthly Revenue Impact	Annual Revenue Impact
2 additional jobs/week captured (conservative)	GHS 16,000 – GHS 24,000	GHS 192,000 – GHS 288,000
Staff time freed × 3 people × 3hrs/day	~270 hours of selling time recovered	Redirectable to closing bigger contracts
Reduction in quote errors & margin leakage	Estimated 5–8% margin protection per job	Compounds over hundreds of quotes

6. First-Mover Advantage in Ghana

Ghana's construction sector is growing rapidly. The residential housing deficit, commercial real estate expansion in Accra, and infrastructure investment mean that the volume of contractors, developers, and architects who need glass and aluminium materials is increasing every year.

Yet none of Sofaamy's competitors — no glass or aluminium supplier in Ghana — currently offers a self-serve digital estimator or AI product advisor. This is the window.

What First-Mover Advantage Looks Like	What Happens If a Competitor Moves First
- Contractors default to Sofaamy because you make quoting easiest - The tool becomes associated with your brand — not a feature, but an identity - Architects and developers recommend your company specifically because of the tool - Organic social sharing: contractors screenshot quotes, share on WhatsApp groups - Data: you collect what projects contractors are building — invaluable for stock planning	- Contractors develop loyalty to whoever serves them first digitally - Sofaamy's traditional strengths — product quality, location — become less differentiating - Catching up requires more investment and the market perception is already set

The companies in Australia, the UK, and the USA that built these tools did not do so because they were struggling. They built them while they were strong, to widen the gap between themselves and their competition. That is the same strategic window available to Sofaamy today.

7. About Veloxa Technology Limited

Veloxa Technology Limited is an Accra-based AI and software company specialising in production-grade AI systems for African businesses. We build tools that solve real operational problems — not experiments, but deployed solutions that generate measurable business value.

7.1 Relevant Work

Project	Description
VeloxaBookMe	AI appointment booking agent for Ghanaian service businesses. Built on Telegram + n8n + Gemini AI + Google Sheets. Handles natural language bookings, confirmations, and reminders with zero human input required.
Production RAG Document AI Agent	A document intelligence system built on FastAPI, Supabase with vector search (pgvector), and Next.js 14. Users query complex documents in natural language and receive precise, sourced answers. This technology underpins the Glass Advisor's AI recommendation engine.
VeloxaRecruit	AI-powered recruitment and hiring platform built for African markets. Currently in active demo phase with Ghanaian recruiters, with pricing and features adapted specifically for local market conditions.
CassavaGuard	Crop disease detection system using EfficientNet-B4 deep learning, built for Ghanaian farmers and agricultural extension officers. Demonstrates our commitment to building AI for African contexts, not importing solutions designed elsewhere.

We are not a foreign consultancy proposing a generic solution. We are an Accra-based team that understands Ghana's construction market, the WhatsApp-first communication culture, the GHS pricing context, and the specific materials used in Ghana's climate. This tool is built for Sofaamy's actual customers.

8. Live Demo & Next Steps

A fully functional demo of the Sofaamy Project Assistant is available for you to try right now. No installation. No login. Open on any phone or computer.

LIVE DEMO

<https://sofaamy-project.vercel.app/>

Try the Glass Advisor and Material Estimator — generate a real quote for any project
Please note: The calculations and material requirements in this demo may not be fully accurate as this is a prototype. If approved, we will work closely with your technical experts and sales team to calibrate all pricing, product specifications, and waste factors to match Sofaamy's exact inventory and standards.

8.1 Proposed Engagement

Phase	What Happens	Outcome
1	Discovery & Pricing Alignment (Week 1)	We meet, you share your real product catalog and pricing. We align the tool to your exact inventory and GHS prices.
2	Build & Test (Weeks 2–3)	Full tool built with your branding, your products, and your WhatsApp numbers integrated. You test internally with your team.
3	Pilot Launch (Week 4)	Tool goes live. Share the link with your top 10 contractor clients and gather feedback. Track how many quotes are generated vs. WhatsApp hand-offs.
4	Optimise & Scale (Month 2+)	Based on real usage data, we refine recommendations, update pricing, add products, and integrate with your WhatsApp Business API for full automation.
