Workflow Document: End-to-End Order and Production Management

Document Version: 1.0

Date: 24-10-2025

1. Introduction

This document outlines the complete workflow for quote generation, sales order processing, production, and delivery within the Odoo ERP system. The process begins with a client request and concludes with the dispatch of the finished product, ensuring control, validation, and transparency at every stage.

2. Process Overview

The workflow is segmented into seven key phases:

- 1. **Quote Generation**
 - 2. **Quote Validation & Sales Order Conversion**
 - 3. **Delivery & Invoice Creation**
 - 4. **Drawings & Production Planning**
 - 5. **Production Workflow**
 - 6. **Dispatch**
 - 7. **Reporting**
-

3. Phase 1: Quote Generation

Actor(s): Extractor, Sales Agent

Step	Action	Description & Business Rules
1	Client Request	Client approaches the service desk to request a quote.
2	Specification & Sketch	The Extractor obtains specifications and creates a broad sketch on paper with associated accessories.

Step	Action	Description & Business Rules
3	Customer Management	The Sales Agent receives the paper and checks Odoo to see if the customer already exists. If not found, a new contact is created (Odoo automatically checks for duplicates).
4	Quotation Creation	The agent creates a new quotation in Odoo and enters: • Job Description • Measurements (in sqm) • Job Category (filters the accessories list) • Internal Pricing Nuances (Customer Copies, Breakages, Waste, Special Handling)
5	Control & Validation	System Enforcements: • Sales Agents cannot edit accessory prices (Supervisor privilege only, with audit trail). • Accessory images must be shown on the quotation. • Quotation validity is 30 days (must be displayed on the quote). • Discounts are locked to 5% for accessories and 10% for Glass. Override requires designated User IDs.
6	Quote Delivery	The finalized quote is generated in a pre-approved format and sent via Email, Odoo WhatsApp plugin, or as a physical printout.

4. Phase 2: Quote Validation & Sales Order Conversion

Actor(s): Customer, Cashier, (Supervisor if needed)

Step	Action	Description & Business Rules
1	Customer Payment	The customer pays for the quotation, initiating validation.
2	Validation & Sign-off	A validation copy is printed. The customer signs off, confirming the specifications are final and non-reversible.

Step	Action	Description & Business Rules
3	Quote Age Check	The system checks if the quote was created within the last 30 days. • If within 30 days: Proceeds to conversion. • If older than 30 days: Requires a Supervisor ID to unlock for validation.
4	Customer Copy Check	If the 'Customer Copy' nuance was used, the Cashier is prompted to have the Sales Agent revise or remove it before validation can proceed.
5	Sales Order Creation	Upon successful validation, the quote is automatically converted to a Sales Order .
6	Unbundling	The system unbundles the quote into recognized service and inventory items on the Sales Order. Pricing adjustments for Breakages, Waste, and Special Handling are also unbundled at this stage.

5. Phase 3: Delivery & Invoice Creation

Actor(s): System, Cashier

Step	Action	Description & Business Rules
1	Order Confirmation	The Cashier confirms the Sales Order.
2	Inventory Reservation	Upon confirmation: • Accessories are unbundled and reserved in the warehouse. • Glass is queued for delivery at the GPU store.
3	Invoice Creation	A confirmed Sales Order automatically creates an invoice , and the client's account is debited.

6. Phase 4: Drawings & Production Planning

Actor(s): Drawing Team, Production Supervisor

Step	Action	Description & Business Rules
1	Queue for Drawings	A successfully created invoice queues the order in the drawing team's workflow.
2	Drawing Creation	The drawing team creates drawings in Smart Builder software and attaches them to the Odoo order.
3	Factory Workflow Handoff	If drawings are not required , the team acknowledges this and forwards the order directly to the factory workflow.
4	Production Planning	The Production Supervisor uses a dashboard to filter jobs (Pending, Ongoing, Completed) and commences the production workflow.

7. Phase 5: Production Workflow

Actor(s): Production Supervisor, Job Monitoring Officer, System

Step	Action	Description & Business Rules
1	Tag Generation	When the Supervisor starts the order, tags are automatically generated for each glass piece. Services to be performed are auto generated based on requirements.
2	Production Steps	The workflow progresses through these stages: • CT – Cutting • PH – Polishing • CNC – CNC • SB – Sandblasting • TEM – Tempering • DG – Double Glazing • LAM – Lamination

Step	Action	Description & Business Rules
3	Workflow Monitoring	Job Monitoring Officers use an Android/iOS platform to manage workflows. Completion of one stage automatically starts the next designated stage.
4	Breakage Handling	If a glass piece is damaged, it is sent back to the Production Planning dashboard with a "damaged" insignia.
5	Final Assembly	After all stages, the officer can assign a glass stand before marking it for delivery.
6	Delivery Hold/Ready	• Ready-for-Delivery: Order moves here if there are no financial outstandings. • Delivery-on-Hold: Order is held here if there are financial outstandings. • The Finance Team can move an order from "on-hold" to "ready" if the client has approved credit terms.
7	Customer Notification	Odoo automatically sends pickup prompts to the customer once all glasses in an order are completed.

8. Phase 6: Dispatch

Actor(s): Dispatch Team

Step	Action	Description & Business Rules
1	Dispatch Action	The dispatch team clicks the "Dispatch" button for orders on the "ready-for-delivery" list.
2	GPU Fulfilment	This action delivers the glass that was queued and reserved at the GPU store to the client.

9. Phase 7: Reporting

Actor(s): Production Manager, GPU, Finance Team

Step	Action	Description & Business Rules
1	Report Generation	Odoo generates custom reports as requested by the Production Manager, GPU, or Finance Team for analysis and decision-making.
